PROFILE

I'm a dedicated developer with hands-on experience in Django and React building dynamic web applications from the ground up. My projects span interactive E-Learning platform , E-mart, Online-Ticket-Booking, Chatbot, etc. enjoy optimizing user experiences and integrating functionalities like automated emails, ensuring responsive and user-friendly interfaces with a seamless backend.

PROJECTS

Elearning Platform

2024

It is based on django

- An e-learning project built on Django offers seamless course management, user authentication, quizzes, and certificate generation, ensuring efficient, engaging online education delivery
- This project is based in django where student read everything related to programming.

Ticket Booking Platform

it is based on React and django with using websocket

- A robust ticket booking platform using Django and React with WebSocket integration provides real-time seat availability updates, secure booking, and dynamic user experiences. This setup ensures smooth transactions, live notifications, and efficient management of bookings for travel.

E-Mart

Based on React and django

- An e-commerce website using React and Django enables a seamless shopping experience with real-time inventory updates, secure payment processing, and intuitive navigation. Users enjoy smooth transactions, responsive design, and efficient product management.
